

# Token Mined by Community (TMBC)

## Overview

**Token Name:** Token Mined by Community

**Symbol:** TMBC

**Decimals:** 3

**Blockchain:** Binance Smart Chain (BSC)

The TMBC project aims to create a token ecosystem driven entirely by the community.

## Vision

Our vision is to foster a decentralized and community-driven ecosystem where participants earn rewards through engagement, mining, and social contributions. By implementing transparent mechanisms and fair distribution, we aim to eliminate centralized control and ensure equitable participation for all stakeholders.

---

## Phase 1: Community Mining

**Phase 1 Contract address:** 0x16dec8ac8bd7815577f1f32c7e2c0ad3d79bbb6e

In the first phase, users can actively participate in the TMBC ecosystem through mining and inviting friends. The mining process is governed by the following mechanisms:

### Mining Process

- 1. Upgrade Miner:**  
Users pay the fee to upgrade their mining level. A portion of the fee is distributed to the referrer and project owner. This fee is essential to prevent attacks from KOGE token owners and support marketing efforts too.
- 2. Automatic Reward Distribution:**  
TMBC mining rewards are withdrawn automatically every second and added to the user's balance without the need for manual harvests.
- 3. Referral Incentives:**  
Users can invite friends to join, gaining benefits when the referred friend upgrades their miner level.

## Phase 2: Token Airdrop and Contract Transition

After the completion of Phase 1, mining activities will cease, and a new ERC20 token contract will be launched. This phase includes airdropping tokens to users based on their contributions during Phase 1.

### Key Features

- **Mining Transition:**  
The original contract will be stopped, marking the end of mining rewards.
- **Airdrop Distribution:**  
Users will receive TMBC tokens based on:
  - Activity in the Phase 1 contract.
  - Social contributions.
  - Referral participation.
  - Launch date and engagement metrics.
- **Fair Distribution:**  
100% of the TMBC tokens will be minted and distributed via airdrops to ensure equitable allocation.

## Phase 3: PancakeSwap Listing

In the final phase, TMBC will be listed on PancakeSwap, providing liquidity and enabling trading. The liquidity tokens will be permanently burned to ensure trust and mitigate risks of scams.

### Key Features

- **Liquidity Pool Creation:**  
A liquidity pool will be established on PancakeSwap to enable seamless trading of TMBC.
- **Token Security:**  
Liquidity tokens will be burned, ensuring no central authority can withdraw or manipulate liquidity.
- **Decentralized Governance:**  
The community will be empowered to participate in decision-making for future developments.

# **Roadmap**

**Phase 1: Community Mining (Ongoing)**

**Phase 2: Airdrop and Transition (Future)**

**Phase 3: PancakeSwap Listing (Future)**
